SUMMARY

Software Engineer with 6 years of industry experience in full-stack development, distributed systems, and AI-assisted tooling, now completing an M.S. in Computer Science at ASU (GPA 3.78). Built enterprise-scale features end-to-end at Delphix (Angular + Java) and telecom-scale messaging pipelines at Comviva (GoLang + Redis + Oracle). Currently building AI-powered developer tools using Python, Groq LLMs, and ONNX. Teaching Assistant for Software Security. Bringing production-grade ownership and senior-level autonomy to an internship role.

EDUCATION

M.S. Computer Science	Aug 2025 - May 2027
Arizona State University, Tempe, AZ	3.78 GPA
Courses: Software Security, Advanced Computer Network Security, Distributed Database Systems, AI, Knowledge Representation, Software Design	
Role: Teaching Assistant / Grader for Software Security	
B.E. Computer Science	Aug 2015 - May 2019
R.V. College of Engineering, Bangalore, India	3.33 GPA

TECHNICAL SKILLS

Programming Languages: Java, Python, GoLang, JavaScript, C++, Bash
Front-End: Angular, React.js, HTML, CSS, Bootstrap
Back-End & APIs: Node.js, RESTful APIs, LLM APIs, Redis, Elasticsearch
Tools, Databases, and OS: PostgreSQL, MySQL, Oracle DB, MS SQL, Docker, Jenkins, GitHub, GitHub Copilot, Linux/Unix

CERTIFICATIONS

GoLang - Udemy
The Complete Node.js Developer Course (3rd Edition) - Udemy
React.js - Udemy
SIP (Session Initiation Protocol) - Udemy

PROFESSIONAL EXPERIENCE

Delphix by Perforce, India: Senior Software Development Engineer	Jul 2021 - May 2025
- Owned feature development end-to-end from requirements gathering through production release -- for the Masking Engine using Angular and Java. - Remodeled the Masking Engine UI to improve sensitive-data masking workflows using Angular; raised customer satisfaction by 15%. - Built and maintained RESTful API integrations between the Angular frontend and Java backend services for an enterprise data-security platform. - Performed root-cause analysis and systematic debugging of distributed service issues across the Java, JavaScript, Docker, and PostgreSQL stack. - Designed component-level unit tests and streamlined CI/CD release workflows, cutting application testing time by 20%. - Led end-to-end release cycles as designated release engineer, coordinating QA signoffs and deployments across two parallel development teams. - Applied AI-assisted development using GitHub Copilot to accelerate feature delivery and code review cycles. - Developed Python scripts for internal automation and tooling, streamlining data-masking configuration and QA workflows. - Engineering Excellence Award (2024) for exceptional contributions to critical projects.	

Comviva, A Tech Mahindra Company, India: Senior Software Developer

Aug 2019 - Jul 2021

- Designed and developed UNO, a comprehensive 4G messaging platform handling SMS, MMS, and USSD delivery using GoLang, MySQL, Oracle DB, and Redis.
- Built high-throughput message-routing pipelines processing telecom-scale SMS/MMS/USSD traffic on GoLang + Redis + Oracle.
- Implemented time and volume restrictions for the SMS system and developed an Opt-In/Opt-Out Do Not Disturb feature using Java and MySQL.
- Automated supplier-price uploads and SMS-cost workflows using Node.js, React.js, and Oracle DB.
- Recognized Subject Matter Expert on the SMSC module, leading firewall and SMSHub integration projects across multiple telecom client deployments.
- Best Talent Award (FY20-21) and Heroes of MBS Award for outstanding performance.

Comviva, A Tech Mahindra Company, India: Software Engineering Intern

Jan 2019 - May 2019

- Designed Elasticsearch-backed activity logs, building an automated system for recording all user-initiated changes in real time.
- Integrated Lucene search capabilities into the subscriber-management platform, enabling faster data retrieval and improved query performance.

Additional Qualifications

- Engineering Excellence Award (2024) - Delphix by Perforce, recognized for exceptional contributions to critical projects
- Best Talent Award (FY20-21) - Comviva, awarded for outstanding annual performance
- Heroes of MBS Award - Comviva

PROJECTS**AI Resume & Cover-Letter Generator, Personal Project**

Mar 2026

- Built an AI-powered resume and cover-letter generator using Python, Groq LLM API (Llama 3.3-70b), and python-docx that auto-tailors content to any job description for ATS optimization.
- Designed a master-profile architecture that feeds a structured JSON schema to the LLM, ensuring all generated output is grounded in real experience with zero fabrication.

Self-Tracking Telescope, Class Project

Sep 2025

- Designing and developing a self-tracking telescope (CPS) that integrates sensors for automated celestial-object tracking using embedded systems and control algorithms.

Kavach Webpage, Personal Project

Summer 2020

- Developed an interactive Angular webpage for onboarding and publishing the open-source Kavach authentication library.
